Procedure: Emissiereductieverklaring	Documentcode: PR-BO-07

Declaration of emission reduction

This Declaration of emission reduction was drafted by Sysmex SA in Etten-Leur and Sysmex in Hoeilaart.

The policy as regards emission reduction focusses on the control and the limitation of the emissions in our work-related activities. This is achieved by reducing the use of energy by 5 % within the next five years as from the year of reference (2014) within a repeated process of inventory and assessment of energy flows within our company.

Within the energy management plan, we name objectives that promote our policy as regards emission reduction. With periodic assessment, the management will be able to see whether the reduction objectives have been achieved. By implementing a plan-do-check-act method, we will strive to continually improve our energy management system.

With this declaration, the personnel, the persons working for or on behalf of our company, the (potential) partners and other stakeholders are informed, among others, of the reduction objectives set by the management at the level of the company. And, if applicable, for which an allocation benefit related to CO2 has been granted.

The management will provide efficient means in order to achieve the objectives and take an active and demonstrable part to initiatives as regards CO2 reduction. We are striving for a company policy that fully takes the CO2 issue at level 4 of the CO2 performance ladder into account. On this basis, we wish to carry out a continuous improvement of our emission reduction policy and increase employee awareness as regards emission reduction in our activities.

Mrs. M. van Wintershoven has been appointed CO2 Manager by the Management.

On behalf of Sysmex Management,

J. W. Schipper
Director
